Education

- 2026 (expected) **Ph.D.**, Philosophy, UC Berkeley
Committee: Johann Frick (co-chair), R. Jay Wallace (co-chair), Anna Stilz
- 2024 **M.S.**, Computer Science, Stanford
Research supervisors: Thomas Icard, Omer Reingold, Li-Yang Tan
- 2020 **B.A.** Philosophy (Honors), **B.S.** Math, Stanford
Thesis advisors: Michael Bratman, Barry Maguire

Areas

Specialization: Ethics (Practical Ethics; Normative Ethics; Metaethics) and Political Philosophy

Competence: Action, Language, Logic, Race, Science

Dissertation: Reasons by Request

Requesters seem to have what is, on reflection, a remarkable power: to create reasons at will. My dissertation explores this central but overlooked dimension of our normative lives. How can requesters give us reasons to do what they want, even when they stand in no relation of authority over us? And what would be lost if we saw requests as devices for communicating the existence of pre-existing reasons, rather than creating new ones? I explain how requests create reasons and how the values served by the power to request constrain its permissible use. In characterizing the valuable relationships sustained by requests, my dissertation develops a view of reciprocity that sheds new light on a wide range of further issues, including the morality of markets, duties of fairness, distributive justice, and our reasons to care about future generations.

Reasons by Request

Dissertation Summary

You are not required to stop and aid every stranger lost in the subway. Upon seeing one, you might cite your discretion to defer assistance for another occasion, thinking to yourself, “I will help the next time I see someone in their shoes.” But this thought rings hollow when the lost stranger *requests* your guidance. Your normative situation has changed, and you must now give a reason for not helping in this particular case, or else provide assistance. Requesters have what is, on reflection, a remarkable power: to create reasons at will. The central puzzle of requests is to explain how this is possible. What accounts for the ability of requesters to create reasons for others in this way, even in cases in which they do not stand in any special relation of authority over the requestee?

My dissertation begins by answering this question. At the center of my account is the idea that we have reasons to grant requests because doing so improves our compliance with *imperfect duties*—duties that grant us significant discretion to decide how to comply. Anytime you can help a stranger, you can also think to yourself that you will help next time, and we are correspondingly liable to fall short of our imperfect duties to help others. As a result, it is valuable for you to accept that the lost stranger’s request prevents you from just citing your generic interest in discretion, by providing a reason for compliance in this particular case. Just as religious traditions improve compliance with imperfect duties to give to charities by establishing regular times and recipients for donations, requests improve compliance with imperfect duties more generally.

My account does not appeal to *pre-existing, intimate* relationships between the requester and the requestee. How do the values served by the power to request constrain its permissible use, given that we wield this power at will over perfect strangers? What do we owe to the recipients of our requests? I approach this question by way of an asymmetry between requests and offers: it is often not okay to request an act, but perfectly fine to accept an offer for it. What might explain this? After all, the request and offer result in the same duty upon their acceptance, and they concern the same act. My second chapter argues that some requests are wrongful *precisely because they create reasons*. Creating a reason often generates a double-bind for the requestee: if they act as requested, they pay the practical cost of doing so; if they do not, they pay a moral cost, in the form of a reason for regret. While this double-bind does not always make requests wrongful, I show how it can be intrusive, exploitative, and coercive. Offers do not create the same double-bind, I argue, because offers do not as such create reasons.

Even if requests do not generally invoke antecedent relationships, they create reasons which can help to further our relationships. Prior work models these relationships in terms of *material* reciprocity: the mutual exchange of benefits. I argue that requests are not just efficient vehicles for exchanging benefits, but can function to develop intrinsically valuable relationships. They thereby sustain *relational* reciprocity, which is realized when we share responsibility for deepening the value of a relationship. My third chapter defends the distinction between material and relational reciprocity and argues that it sheds new light on a wide range of further issues, including the morality of markets, duties of fairness, distributive justice, and our reasons to care about future generations.
