Employment

Embedded Ethics Fellow, Stanford University 2026-current
The McCoy Family Center for Ethics in Society &
The Institute for Human-Centered Artificial Intelligence (HAI)

Areas

Specialization: Ethics and Political Philosophy (including AI)
Competence: Philosophy of Action, Language, Race, and Science; Logic

Education

Ph.D., Philosophy, University of California, Berkeley 2026
Dissertation: *Reasons by Request*
Committee: Johann Frick (co-chair), R. Jay Wallace (co-chair), Anna Stilz

M.S., Computer Science, Stanford University 2024
Research supervisors: Thomas Icard, Omer Reingold, Li-Yang Tan

B.A., Philosophy (Honors) & B.S., Mathematics, Stanford University 2020
Thesis advisors: Michael Bratman, Barry Maguire

Peer-reviewed publications

Reasons by Request

Dissertation Abstract

You are not required to stop and aid every stranger you encounter. Seeing a lost tourist, you can permissibly decide not to help, thinking to yourself, "I'll help the next time I see someone in their shoes." But this thought rings hollow when the lost stranger *requests* your help. Your normative situation has changed. You must now cite a reason for not helping or else provide assistance. Requesters wield what is, on reflection, a remarkable power: to create reasons at will. The central puzzle of requests is to explain how this is possible. How can requesters give us reasons to do what they want, even when they stand in no relation of authority over us? And what would be lost if we saw requests as merely reminding us of reasons that exist already, rather than creating new ones?

My dissertation begins by explaining how requests create reasons. At the center of my account is the idea that we have reasons to grant requests when and because doing so improves our compliance with our duties. For example, we have a duty of mutual aid, but because this duty gives us the discretion to decide exactly when and how we will help others, we are liable to fall short of it, by repeatedly postponing compliance. When a lost stranger asks you for help, their request gives you a reason *here* and *now* to help *this person*. The concrete nature of the request makes it harder to keep postponing your duty of mutual aid. In general, requests create reasons because they thereby help us to comply better with our flexible moral duties.

I next consider how the values served by the power to request constrain its permissible use: What do we owe to the recipients of our requests? I approach this question by way of an asymmetry between requests and offers. It is often not okay to request an act, but perfectly fine to accept an offer for it. What might explain this? After all, the request and offer result in the same duty upon their acceptance, and they concern the same act. I argue that some requests are wrongful *precisely because they create reasons*. Creating a reason often generates a double-bind for the requestee: if they act as requested, they pay the practical cost of doing so; if they do not, they pay a moral cost, in the form of a reason for regret. While this double-bind does not always make requests wrongful, I show how it can be intrusive, manipulative, and coercive. Offers do not create the same double-bind, I argue, because offers do not as such create reasons.

I turn, finally, to a foundational question: How can the power to create a reason by requesting be explained *by its value*? It does not in general follow from the fact that it would be good for us to possess an ability that we do possess it: it would be good if we could fly like birds, but we can't. Hence there is a worry that my account of requests, along with several prominent value-based explanations of requests, promises, and commands, rests on a fallacious form of wishful thinking. I argue that the power to create reasons by requesting can be justified by comparing its value *for each person:* a person possesses this power when, in general, it is better for *requesters* in these circumstances to *possess* the power than it would be for *requestees* to *not be subject* to the power. I generalize my account to show how commands and promises can be justified, and I argue my view does not rest on wishful thinking, but rather on a familiar and widely-accepted form of explanation in ethics, which justifies normative principles by considering what the world would be like for each of us, were those principles generally accepted.
